

RICK CLINTON

Customer Success | Program Operations | AI Evaluation
Chennai, India | +91 9176933935 | clinpeter@gmail.com | github.com/Rick-Clinton-jpg

SUMMARY

Customer-facing operations professional with 5+ years at Walmart and Amazon. At Walmart I owned onboarding for 700+ international marketplace sellers with zero client-side escalations, served as the escalation lead, trained business-development teams, and built a duplicate-identification playbook from scratch that is still in use. Since 2026 I have directed hands-on AI agent builds and evaluation work: adversarial test campaigns against real LLMs, policy gates that check agent actions, and cloud deployments. I bring structure to ambiguous, multi-stakeholder work and I verify results before I trust them. Open to relocation.

CORE COMPETENCIES

Customer onboarding and account management | Escalation management | Discovery and requirements gathering | Zero-to-one process and playbook design | SOPs, runbooks and documentation | Train-the-trainer and change management | Program management across stakeholders | Root cause analysis | SLA and quality management | AI evaluation design and adversarial testing | AI-assisted workflows (Claude Code), LLM APIs, agent systems

PROFESSIONAL EXPERIENCE

Project Management Specialist | Walmart, Chennai

Aug 2022 to Jun 2025

- Owned the customer lifecycle for international marketplace sellers through a structured eight-week implementation program, onboarding 15 to 22 sellers per month and 700+ clients over three years with zero client-side escalations.
- Ran discovery calls to assess each seller's business model and prior marketplace experience, then tailored the onboarding plan to their objectives.
- Guided sellers through catalog upload tools, data templates, and compliance standards to reach a smooth go-live, translating technical requirements for non-technical audiences.
- Served as the escalation point of contact for high-priority sellers; performed root cause analysis on listing errors and coordinated cross-functional fixes.
- Maintained SLA adherence through peak inflow periods of up to 7 new sellers per week.
- Drove adoption at scale: trained international business-development teams ahead of festive high-volume seasons and ran knowledge-transfer sessions so stakeholders adopted new processes smoothly.
- Acted as Subject Matter Expert for internal teams and external partners including Tata Consultancy Services (TCS).
- Led a duplicate-item identification process, standardizing the attributes used to detect duplicates; the playbook improved data quality across product categories and remains in use.
- Received Stellar Stakeholder Recognition (April 2023) from the VP and Director of International Marketplace Development, citing faster seller onboarding and a more collaborative experience for international sellers.

Catalogue Associate | Amazon Pvt Ltd

Apr 2019 to May 2021

- Managed high-volume catalog operations against defined SLA and quality standards; coordinated with vendors on pricing and product-information integrity and flagged SLA risks early during large-scale updates.

AI SYSTEMS AND EVALUATION

Since July 2026 I have directed an AI-assisted portfolio of agent systems using Claude Code and other coding agents: I define the architecture, test plans, and acceptance criteria, and the agents assist with implementation. The common thread is evaluation: designing tests that catch real failures, and not trusting a result until it is verified.

Mirror World | Adversarial evaluation: Ran escape campaigns against real LLMs in a hardened sandbox with zero real capability grants. Found a timing side-channel (99.2 percent detectable), shipped a fix, and validated it on held-out data rather than a misleading in-sample result. Caught my own regression test giving unstable results and fixed it by averaging 20 independent splits.

Armour and Chainmail | Policy gates for AI agents: Deterministic layers that decide what an agent may do before it acts. Armour: 146 passing tests and 20 of 20 modeled mutants killed. Chainmail: an adversarial test family for authority misuse (over-delegation, stale authority, replay); 203 tests passing.

Quorum | Google All Things Agentic Hackathon: Deployed a multi-agent coordinator on Google Cloud Run with Gemini and Vertex AI; three independent verifiers must agree before a patch proceeds, with a Firestore audit trail.

Buy or Wait? | HackerRank Orchestrate, Sept 2026: Built a financial affordability agent in 21 hours; isolated each safety check's effect on scoring and kept the stricter configuration over a higher benchmark score. Ranked 937 of 3,062.

RESEARCH SPRINTS

Mirage | Apart Research Agent Sprint, Sept 2026: Directed a three-zone Linux containment experiment for AI evaluation sandboxes; 23 of 23 required controls passed, with offline-verifiable evidence so a reviewer can check results without trusting the originating lab.

WRITING

JUDGE (position paper, 2026); Building With a Conditionally Trusted Machine (working paper, 2026); The Five-Layer Stack (working paper, 2026). Each explains technical AI verification ideas for a broad audience.

EDUCATION

B.Tech, Mechanical Engineering | SRM University

Diploma, Modern Applied Psychology (DiMAP)
